## **YOU DO NOT HAVE TO APPEAR**

### **Request Information**

---

Records Subject: Steevio Bardadjian                      AKA:  
Date of birth: 05/23/1970                              SSN: 554-81-2130  
Dates Requested: 05/23/1970 - Present                      Records : Medical  
Location: Henry Mayo Newhall Memorial (see Attachment 3)  
    Hospital

### **How to Comply**

---

#### **Step 1**

Provide confirmation you have received this request. To do so, please call 877-739-7481 and choose option 1. Please reference Request Number REC-1544104

#### **Step 2**

Refer to the 'Attachment 3' page to confirm which records are needed.

#### **Step 3**

Once you have compiled all of the necessary records, please sign and date the 'Declaration of Custodian of Records' page.

#### **Step 4**

Once all of the records and the declaration are complete, please upload directly to Gemini's Secure Portal <https://geminiduplication.com/public/records>

Alternatively, you can send records to us via email [records@geminiduplication.com](mailto:records@geminiduplication.com)  
If further assistance is needed, please call us at 877-739-7481

## DECLARATION OF CUSTODIAN OF RECORDS

Name of records subject: Steevio Bardadjian

I declare as follows pursuant to California Evidence Code sections 1560, 1561:

I am employed by and am the duly authorized custodian of records and am authorized to certify records for:

Henry Mayo Newhall Memorial Hospital

### (Facility Name)

Please be sure to include this Declaration along with the records you are providing to Gemini. Without a completed Declaration, this Subpoena or Authorization has not been fulfilled. If no records are being provided to Gemini, this Declaration is still required.

#### I certify (Please check all that apply):

That the accompanying records are true and complete copies of records described in the Subpoena or Authorization. These records were maintained in the regular course and scope of business of the employer stated above and were prepared by authorized personnel. No records, documents or other materials have been withheld except as noted below. I further certify that I have made a diligent, thorough, and complete search of all available sources including the computer databases for both open and closed files whether in-house or in a storage facility or any other location under the control of my employer for any and all items to be produced on the attached subpoena duces tecum or authorization for records subject named above.

That no records were produced because no records were found for the individual named on the Subpoena or Authorization. Please indicate the reason, if any, as to why records do not exist:

---

That partial records were produced. Please indicate below which records were not provided from those requested on the attached Subpoena or Authorization:

---

That all or partial records are located at the following facility:

Facility Name, Address, and Phone Number: \_\_\_\_\_

Type of Records Located at this Facility: \_\_\_\_\_

---

That records were provided to the Applicant Attorney of the case stated on the provided Subpoena or Authorization on \_\_\_\_\_ (date).

#### Records were produced in the following manner:

Records were made available to Gemini and/or its affiliate for copying and/or picking up.

Records were mailed/faxed/e-mailed to Gemini at the address listed on the Subpoena or Authorization in compliance with Evidence Code section 1560.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this Declaration is executed on \_\_\_\_\_ at \_\_\_\_\_ (city), State of \_\_\_\_\_.

*The People of the State of California Send Greetings to:* Henry Mayo Newhall Memorial Hospital

25727 Mcbean Pkwy Fl. 2 Valencia, CA 91355

We COMMAND YOU to appear before: Gemini Legal Support, Inc.

at 250 Technology Way Rocklin CA 95765

on the 21st day of January, 2025 at 8:13 o'clock AM to testify in the above-  
entitled matter and to bring with you and produce the following described documents, papers, books and records.

**-Please see Attachment 3 for a detailed description of requested records-**

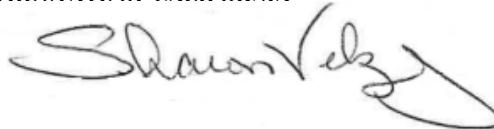

(Do not produce X-rays unless specifically mentioned above.)

For failure to attend as required, you may be deemed guilty of a contempt and liable to pay to the parties aggrieved all losses and damages sustained thereby and forfeit one hundred dollars in addition thereto.

This subpoena is issued at the request of the person making the declaration on the reverse hereof, or on the copy which is served herewith.

Date 12/19/2024

**WORKERS' COMPENSATION APPEALS BOARD  
OF THE STATE OF CALIFORNIA**

*Secretary, Assistant Secretary, Workers' Compensation Judge*

**\*FOR INJURIES OCCURRING ON OR AFTER JANUARY 1, 1990,  
AND BEFORE JANUARY 1, 1994**

If no Application for Adjudication of Claim has been filed, a declaration under penalty of perjury that the Employee's Claim for Workers' Compensation Benefits (Form DWC-1) has been filed pursuant to Labor Code Section 5401 must be executed properly.

**SEE REVERSE SIDE  
(SUBPOENA INVALID WITHOUT DECLARATION)**

You may fully comply with this subpoena by mailing the records described (or authenticated copies, Evid. Code 1561) to the person and place stated above within ten (10) days of the date of service of this subpoena.

This subpoena does not apply to any member of the Highway Patrol, Sheriff's Office or city Police Department unless accompanied by notice from this Board that deposit of the witness fee has been made in accordance with Government Code 68097.2, et seq.

## **DECLARATION FOR SUBPOENA DUCES TECUM**

Case No. SIF11540526

STATE OF CALIFORNIA, County of Los Angeles

The undersigned states:

That he /she is (one of) the attorney(s) of record / representative(s) for the applicant/defendant in the action captioned on the reverse hereof. That Henry Mayo Newhall Memorial Hospital

has in his/her possession or under his/her control the documents described on the reverse hereof. That said documents are material to the issues involved in the case for the following reasons:

SAID RECORDS ARE RELEVANT TO THE ALLEGATIONS AND DEFENSES BY THE PARTIES IN THE PROSECUTION OF THIS MATTER, TO PROVIDE AN ACCURATE MEDICAL HISTORY OF THE APPLICANT, TO PROVE AN INJURY AND NOTICE THEREOF, TO PROVIDE THE RIGHT TO COMPENSATION, PERMANENT AND TEMPORARY DISABILITY, MEDICAL TREATMENT, AND ANY POSSIBLE PENALTIES. PURSUANT TO LABOR CODE SECTION 5401 FORM DWC 1 HAS BEEN DULY FILED.

### **Declaration for Injuries on or After January 1, 1990 and Before January 1, 1994**

- That an Employee's Claim for Workers' Compensation Benefits (DWC Form 1) has been filed in accordance with Labor Code Section 5401 by the alleged injured worker whose records are sought, or if the worker is deceased, by the dependent(s) of the decedent, and that a true copy of the form filed is attached hereto. (*Check box if applicable and part of declaration below. See instructions on front of subpoena.*)

I declare under penalty of perjury that the foregoing is true and correct

Nutritional counseling based on current dietary goal. Active listening during education on nutrition with participation in class discussions. Complete dietary assessment at discharge.</p> <p>Dietary goal: Heart Healthy</p>	<b>PSYCHOSOCIAL REASSESSMENT</b> <p><b>Psychosocial Test:</b> PHQ9: 8 If necessary <b>Psychosocial Test Interpretations:</b> PHQ score has decreased from 16 to 8. His feelings of being down, depressed and hopeless have decreased from more than half the days to several days. His sleep has improved greatly, his appetite is much better, and he feels better about himself. His QLI has improved from his initial assessment especially in the areas of worry.</p> <p><input type="checkbox"/> Depression <input type="checkbox"/> Stress <input type="checkbox"/> Anxiety <input type="checkbox"/> Uses stress mgmt. skills <input checked="" type="checkbox"/> Family Support</p> <p style="border: 1px solid black; padding: 5px; text-align: center;"><b>Plan for Psychosocial</b></p> <p style="border: 1px solid black; padding: 5px; text-align: center;"><b>INTERVENTIONS</b></p> <p>Complete assessments at discharge. Obtain a list of recommended therapists from the staff. Active listening during education on stress, anxiety, depression and coping skills and participate in class discussions. Enlist the help of family members and friends for support.</p> <p>Psychotropic medications: none</p> <p><b>Education: See Page 2</b></p> <p><b>Target Goals and Progression:</b></p> <p>Adhere to the prescribed heart healthy diet - patient states he is currently following a keto diet. Discussed the safety considerations of a high fat diet. Patient believes that fat does not play a part in his diagnosis. States he lost 30 pounds on keto and reduced his HgbA1c from 12 to below 7. Achieve established weight goal of 184.8. Pt. has lost 5 lbs. since starting the program. Improve Picture Your Plate score at discharge.</p>
<p><b>Plan for Other Core Components</b></p> <p style="border: 1px solid black; padding: 5px; text-align: center;"><b>INTERVENTIONS</b></p> <p>Pt. currently taking Diltiazem 30 mg qid. Monitor blood pressure readings and report abnormal responses to MD if remain high for two weeks. Follow a heart healthy diet with recommendations based on the results of dietary assessment. Initiate a home walking program of at least 30 minutes on non rehab days. Verbalize stressors and determine plan of action. Pt. switched from Jardiance and Metformin for blood sugar management.</p> <p><b>Education: See Page 2</b></p> <p><b>Target Goals and Progression:</b></p> <p>Resting blood pressure measurements have not been in defined limits for hypertensive patients. Patient states he was taken off of his beta blocker due to low blood pressures at home. We will continue to monitor. A report was sent to Dr.Das regarding his BP but no medications have been changed or added. Pt. takes his Diltiazem at night. Our staff will suggest he try to take it in the morning instead. Improve dietary habits with emphasis on a low fat, low cholesterol and low sodium diet.- see nutrition assessment. Improve home exercise program of at least 150 minutes per week of aerobic activity. Improve levels of stress/coping skills.- see psychosocial assessment. Pt. is currently walking 45-min. daily. Pt.'s biggest stressor is his work.</p>

<b>Home exercise:</b>  Type: walking      Frequency: 3 days Duration: 45 min. <input type="checkbox"/> Resistance training		<b>Physician Signature/Date:</b> Approved By: Dr. James Lee  Signed on: Friday, October 29, 2021 at 10:12:50 AM	
<b>Education: See Completed Right</b> <b>Target Goals and Progression:</b>  Pt. is consistent with class attendance, 3 days per week. Home exercise for 150 minutes of aerobic. Improved METs of at least 0.3 each reporting period. Improved body fat percentage by discharge. Provide education and support with recommendations for aerobic activity at home based on likes, access to equipment, weather restrictions, and orthopedic restrictions. Discussed the importance of a safe exercise program to improve cardiac functionality and consistency. Vital signs are controlled and adaptive to exercise. Pt. has increased his functional capacity by 55% overall but has not improved this reporting period. Pt.'s body composition has improved from 29% which is poor for a man his age to 21% which is good for a man his age.

**Post-Session Comments**

Tolerated exercise session well. Vital signs adaptive to exercise. No complaints. Will continue to assess patient needs and modify exercise regimen as appropriate. Dr. Lee available. Reports no medication changes. Monitor shows: ST with occas. PVC's. Pt's sternal incision at the bottom was oozing still a little. Pt. wanted to start doing arm exercises, but instructed to wait for incision to heal. Pt. to notify surgeon of incision. Report sent to Dr. Das on hypertensive blood pressures at rest and with exercise the past two weeks.

**Post-Session Comments**

Tolerated exercise session well. Vital signs not adaptive to exercise - BP dropped. No complaints. Will continue to assess patient needs and modify exercise regimen as appropriate. Dr. Lee available. Reports no medication changes. Monitor shows: NSR with frequent PVCs.

Krista R. Salkeld, MSN, RN

\*Per our safety protocol, blood glucose needs to be at 100 to start exercise. Patient's initial blood sugar was 97 - patient refused juice and stated that it has too many carbs and it will "ruin his diet" - patient said he will always refuse juice and that his blood sugar has never dropped below 75. Risks of hypoglycemia post exercise were explained and patient still refused juice and began exercise. Post-exercise blood glucose was 95.

- NOTES:
- (a) Specimen hemolysis is above the manufacturer's interference threshold for this test; interpret result with caution.
  - (b) Deviations up to +43.5% have been observed in patients with high levels of IgG.
  - (c) Specimen hemolysis is above the manufacturer's interference threshold for this test; interpret result with caution.
  - (d) Pharmacy Creatinine Clearance is based on the Cockcroft and Gault formula and is provided for dosing purposes. It is not recommended for patient evaluation.
  - (e) Estimated GFR is reported in mL/min/1.73m<sup>2</sup>. CKD-EPI equation is used to calculate GFR.

SINGLE FRONTAL RADIOGRAPH OF THE CHEST

EXAMINATION DATE AND TIME: 7/7/2021 10:03 AM

COMPARISON: 7/3/2021 chest x-ray

REASON FOR STUDY: Trauma CC:dizziness x 1 wk s/p quadruple bypass.  
+hypotensive at home. +

TECHNIQUE: Single frontal radiograph of the chest is performed.

FINDINGS:

The lungs are clear. Congestive heart failure present previously is no longer seen. The left chest tube has been removed.

The cardiac and mediastinal contours are unremarkable.

Sternal wires are demonstrated.

IMPRESSION:

No active disease is seen in the chest.

Resolved CHF.

**History of Present Illness**

**Time Seen by MD:** 09:07

**Chief Complaint:** Dizziness

**Stated Complaint:** MED EVAL

**History of Present Illness:**

51-year-old male who presents the emergency department for evaluation of lightheadedness. Patient was discharged his past Saturday after quadruple bypass here at Henry Mayo with Dr. Yasuda/Soltero. He reports that during his hospitalization he started to feel lightheaded and this sensation has persisted post discharge. He reports it has not gotten worse and has stayed the same as a lightheadedness he felt during hospitalization. During hospitalization he was told that the lightheadedness was likely secondary to his body equalibrating after surgery. He describes the lightheadedness is the same sensation he had when he had very bad enteritis a few years ago and was very dehydrated which resolved after getting 2 or 3 L of fluid. The patient is a retired ER nurse. He reports the lightheadedness is orthostatic, where it gets triggered when he goes from a laying to a sitting position in a sitting to a standing position. He describes the lightheadedness as "like a head rush when you stand up too quickly." He denies vertigo. No recent chiropractor neck manipulations. He reports his blood pressures at home have been systolic 105-110, but normally before the surgery his blood pressures were in the 130s so he feels like his body is adjusting to this change in blood pressure. Upon discharge they changed his hypertension and diabetes medications. No disequilibrium. He denies any fevers, vomiting, chest pain, shortness of breath, cough/URI symptoms, vaginal pain, dysuria, hematuria, melena, hematocchezia or diarrhea. No headache, neck pain, back pain, vision changes or focal numbness or weakness/tingling. No tinnitus. No ear pain. No syncope. No orthopnea or leg swelling. No associated trauma, injury or fall. His cardiologist Dr. Das.

Past medical history: Coronary artery disease status post quadruple bypass, hypertension hypercholesterolemia, diabetes, chronic back pain from old injury many years ago, L3-L4 discectomy, right meniscus tear

Denies any current tobacco, drugs or alcohol use

**Hospital Course**

Upon arrival to the Emergency Department, the patient was placed into a treatment area and was evaluated by myself. To facilitate the diagnostic process, the ancillary data listed above was ordered and reviewed.

**Medical Decision Making**

**Medical Decision Making**

51-year-old male who presents the emergency department for evaluation of lightheadedness. The patient was recently discharged after quadruple bypass. He has had this lightheadedness since his hospitalization. The lightheadedness has been persistent in the same since his hospitalization. He describes it as orthostatic and "like I'm volume down" (patient is retired ER nurse) as per history of present illness.

I spoke to Dr. Das who recommended CBC and check orthostatics and blood pressure. He is okay with IV fluids.

Patient denies vertigo. Neuro exam is unremarkable. No associated trauma, injury or fall. No recent chiropractor neck manipulations.

There are no systemic or localizing signs/symptoms of infection on review systems or exam. Postoperative sites without clinical evidence of superinfection or wound dehiscence.

Chest x-ray is unremarkable for acute findings. ECG in the emergency department was compared to his old ECG from June 29 and was reviewed by Dr. Das. No emergent findings. No STEMI. Patient denies any associated cardiopulmonary symptoms. He denies any chest pain or shortness of breath. Triage notes noted regarding pain at chest incision site but patient reports this is the same since his surgery and not anything new. Residual incision site pain is expected given recent CABG.

The patient's hemoglobin is 8.8 which is improved as compared to his most recent hemoglobin in the system from July 3.

The patient's presentation, history and exam is most suggestive of a hypovolemic lightheadedness based on the patient's history. The patient was given 1 L of IV fluids and he reports significant improvement of his lightheadedness.

Blood work and urine are unremarkable for acute findings. The patient feels improved after receiving IV fluids. I spoke to Dr. Das who is comfortable with patient being discharged home at this time with instructions to hold his diltiazem dose for systolic blood pressures less than 110. Patient understands and agrees with this discharge plan of care. Patient was discharged smiling, feeling significantly improved, joking around, nontoxic and ambulatory. Patient understands, is comfortable with and agrees with discharge plan of care. All questions answered. Strict return precautions given. Patient understands to follow-up with his primary care doctor and cardiologist within 2 days for reevaluation.

I do not believe that this patient currently requires any further radiographic, laboratory or other ancillary studies at this time given the current clinical picture at this time of evaluation.

The patient is instructed to followup with their PMD within the next 24-48 hours for repeat reevaluation and reexamination. If their symptoms worsen the patient should followup sooner or return to Emergency Department for reevaluation.

The patient is instructed to return to our emergency department for any reason whatsoever as we are open 24 hours a day. Specifically, should the patient's symptoms today recur or worsen, they should return immediately for repeat reevaluation.

**Disposition**

**Additional Impressions**

lightheaded

**Condition:** Good

**Disposition (Non Admission):** HOME/SELF CARE (01)

**Patient Instructions:** ED Dizziness, Uncertain Cause

**Referrals:**

Tebi,Sina M.D. (PCP)

**Additional Instructions:**

Follow-up with your primary care doctor and cardiologist within 2 days for reevaluation.

Return to the emergency department immediately if you experience any persistent or worsening or uncontrolled pain, persistent or worsening lightheadedness, vertigo, fevers, nausea, vomiting, chest pain, shortness of breath, abdominal pain, headache, neck pain, back pain, vision changes, numbness/weakness/tingling, persistent or worsening symptoms or any other concerns.

Hold your diltiazem dose only for systolic blood pressure less than 110.

First and foremost, we want to thank you for choosing Henry Mayo Newhall Memorial Hospital for your emergent care needs. We understand that you have a choice of where to receive care, and we hope that we have met your expectations today.

As a result of your evaluation today, it is felt that you can be discharged home with close outpatient follow-up. Of course, we cannot predict the future and should your condition worsen in any way or should you feel the need to be reevaluated, please return to emergency department immediately to be rechecked. We are open 24 hours a day, 7 days a week and are always staffed with a physician who will be available to see you.

We recommend that you be seen by your primary care physician within the next 24-48 hours to be reevaluated. If you do not have a primary physician at this time, you may call our physician referral hotline at (661) 253-8888 for assistance. In the event that you still have no access to a physician, you may follow-up at Olive View Medical Center in Sylmar. Please obtain an infectious disease screening at Olive View Medical Center if you feel you require it.

**Hospital Course**

Discharge date  
07/03/2021

Admission diagnoses  
(1) Elective CABG

Discharge diagnoses  
(1) S/P CABG x 3  
(2) Diabetes  
(3) Hyperlipidemia  
(4) Multiple vessel coronary artery disease  
(5) Hypertension  
(6) Anxiety

Hospital Course

Patient is a 51-year-old male admitted to hospital for elective CABG procedure with known history of diabetes, hypertension, and hyperlipidemia. Patient was extubated a few hours after procedure and started on Levophed and insulin drip. Patient was able to tolerate diet as well. During procedure, patient's hemoglobin dropped to 7 and patient underwent transfusion to maintain hemoglobin above 8. Patient also experienced lightheadedness and dizziness following procedure, but these symptoms resolved with Levophed and Cardizem drip. IV insulin was converted to oral administration. Hospital course is below:

(1) S/P CABG x 3  
Status: stable

(2) Diabetes  
Status: Chronic  
Qualifiers:

(3) Hyperlipidemia  
Status: Chronic  
Qualifiers:  
Qualified Codes: E78.5 - Hyperlipidemia, unspecified

(4) Multiple vessel coronary artery disease  
Status: Chronic

(5) Hypertension

(6) Anxiety

Assessment & Plan

"Patient is admitted to intensive care unit post CABG  
Status post extubated  
Acute anemia blood loss during procedure hemoglobin dropped to 7  
sp transfusion maintain hemoglobin above 8  
Drain management per cardiothoracic  
Patient is postop day 3 s/p CABG, feeling much better with improved lightheadedness and dizziness  
Discontinued Levophed and Cardizem drip  
Monitoring blood pressure, PRN antihypertensive medication  
Continue insulin transition to oral medication  
Increase activity as tolerated  
Chest tube sp removed  
Hemodynamically stable, no chest pain.

Consult

Cardiology  
Pulmonary Critical Care  
Endocrinology  
Pulmonology  
Thoracic Surgery

Procedure

6/29: 1. Coronary bypass grafting x4; left internal mammary to the left anterior descending, saphenous vein via the radial artery to the intermediate branch, saphenous vein from the aorta to the obtuse marginal, saphenous vein from the aorta to the left ventricular extension branch.  
2. Endoscopic vein harvest, left thigh and left arm.  
3. Epiaortic Doppler scan.

Physical exam

Patient is alert and oriented  
Vital signs as documented reviewed  
Labs reviewed  
Head and neck exam: Neck without JVD. No mass palpated  
Lungs: + wheezing  
Heart: S1, S2

Progress Note - Cardiology

Name: BARDAKJIAN, STEEVIO  
Date of Admission: 06/29/21  
Date of Discharge:

MR#: M000748903  
ACCT#: V00020530154  
ROOM#: ICU M247-1

\*\*Signed\*\*

---

**Assessment/Plan**

ASSESSMENT:

1. Severe multivessel CAD with recent ACS, now electively admitted for CABG. EF known to be intact.
2. s/p CABG on 6/29 by Dr. Yasuda (SVG to RPL, SVG to OM, radial to ramus (radial graft was proximally anastomosed to SVG to OM per surgical report as opposed to aorta), LIMA to LAD)  
- recovering well, extubated, normal creatinine, normal sinus rhythm, post-op anemia requiring blood transfusion
3. Diabetes
4. Hypertension
5. Hyperlipidemia

RECOMMENDATIONS:

1. Continue aspirin, atorvastatin.
2. May resume beta blocker if blood pressure tolerates
3. Recommended to consider diltiazem therapy to maintain radial artery conduit patency.  
Only if blood pressure tolerates.
4. PRBC transfusion as needed to keep Hgb > 8
5. Maintain potassium in the 4-5 range, magnesium greater than 2.

plan:

Supplemental oxygen to keep O2 sat above 92%  
Chest x-ray  
Chest tube management deferred to thoracic surgery  
Cardiothoracic surgery follow-up  
Beta blocker ACE inhibitor and statin in addition to aspirin if no contraindication  
Pressor as needed to keep mean arterial pressure above 65

Thank you very much Dr. Hashemi for allowing me to participate in care of the patient.

DVT prophylaxis: yes  
GI prophylaxis: yes  
HOB > 30 degrees: yes  
Sedation and pain management as needed.

Spent 35 minutes reviewing charts, lab results, radiology reports, consultants notes and examining patient. Also discussed with staff, RN & RT.

Discussed with staff, RT , RN . all questions answered.

**Chief Complaint**

51-year-old male with multiple medical problems including obesity, complicated type 2 diabetes mellitus, hypertension, dyslipidemia, and chronic back pain admitted to the Henry Mayo Newhall Memorial Hospital Hospital because after found to have multiple vessel coronary artery disease. He underwent CABG  $\times$ 3 stents. Postop patient admitted to ICU for further evaluation and management. Patient currently on insulin drip. CXR: Mild congestive heart failure. Question trace bilateral pleural effusions.

Patient diagnoses with the type 2 diabetes mellitus in 2015 and the reports that managed based on metformin therapy, diet, and exercise.

Patient recent hemoglobin A1c 6.8%.

**Interval History**

No acute events.

No hypoglycemia episodes.

Diet started but not optimal.

Afebrile.

**Assessment/Plan**

51 year old male with:

**# Complicated Type 2 Diabetes Mellitus.**

- Carbohydrate controlled diet 2000 Kcal daily.
- Capillary blood glucose monitoring Q AC & HS.
- Insulin lispro sliding scale.
- Insulin lispro **6 units** AC meals.
- Insulin glargine **35 units** q.h.s.
- Blood glucose improving but not optimal yet.

**# Coronary artery disease.**

- Multiple vessel disease and status post CABG x3.
- Admitted to ICU for further evaluation and management.
- On beta blocker, aspirin, and statin.
- Per cardiology and pulmonology.

**# Hypertension.**

- Blood pressure fluctuates but controlled.
- Lisinopril 20 mg p.o. daily.
- Metoprolol 25 mg p.o. b.i.d.

**# Dyslipidemia.**

- On atorvastatin 40 mg p.o. q.h.s.

**# Anemia.**

- H&H drop.
- Monitor.

**Other**

**Discussed With**

Patient and nurse.

**Chief Complaint**

51-year-old male with multiple medical problems including obesity, complicated type 2 diabetes mellitus, hypertension, dyslipidemia, and chronic back pain admitted to the Henry Mayo Newhall Memorial Hospital Hospital because after found to have multiple vessel coronary artery disease. He underwent CABG  $\times$ 3 stents. Postop patient admitted to ICU for further evaluation and management. Patient currently on insulin drip. CXR: Mild congestive heart failure. Question trace bilateral pleural effusions.

Patient diagnoses with the type 2 diabetes mellitus in 2015 and the reports that managed based on metformin therapy, diet, and exercise.

Patient recent hemoglobin A1c 6.8%.

**Interval History**

No acute event.

No hypoglycemia.

Tolerating p.o. and appetite improving.

On low dose epinephrine.

Denies N/V, CP or SOB.

Afebrile.

Item	Value	Date Time

**MDM (Assessment and Plan)**

**Assessment/Plan**

51 year old male with:

**# Complicated Type 2 Diabetes Mellitus.**

- Carbohydrate controlled diet 2000 Kcal daily.
- Capillary blood glucose monitoring Q AC & HS.
- Insulin lispro sliding scale.
- Insulin lispro 6 -> **8 units** AC meals.
- Insulin glargine 35 -> **32 units** q.h.s.
- Blood glucose improving but not optimal yet.

**# Coronary artery disease.**

- Multiple vessel disease and status post CABG x3.
- Admitted to ICU for further evaluation and management.
- On beta blocker, aspirin, and statin.
- Per cardiology and pulmonology.

**# Hypertension.**

- Blood pressure fluctuates but controlled.
- Lisinopril 20 mg p.o. daily.
- Metoprolol 25 mg p.o. b.i.d.

**# Dyslipidemia.**

- On atorvastatin 40 mg p.o. q.h.s.

**# Anemia.**

- H&H drop.
- Monitor.

**Other**

**Discussed With**

Patient and nurse.

**Date/Time of Service**

DATE: 6/30/21 TIME: 09:18

**Previous Notes Reviewed:** Yes

**Chief Complaint**

History of chest pain

**Interval History**

Patient is extubated and stable

Has progressed well except for episode of orthostasis this morning when he was getting off the bed

Norepinephrine 1 mcg/m with a mean arterial pressure of 80 mmHg. He is also on diltiazem drip low-dose to prevent vasospasm from the radial artery harvest. This will be discontinued today as well.

Glasgow Coma Scale 15

Temperature 99.7

Marginal urine output, a euvolemic (IV albumin bolus pending)

Oxygen by nasal cannula

Sinus rhythm

CXR: IMPROVING BIBASILAR SUBSEGMENTAL ATELECTASIS.

Pertinent laboratories: Hemoglobin 8.0, carbon dioxide 22, serum glucose 189, creatinine 0.8, AST 67 with a normal bilirubin of 0.7

**Review of Systems**

14 point review of system is negative except for soreness over the chest tube site. Patient is tolerating p.o. regular diet without problems

### Data Reviewed

**Lab Data:** Labs

**Radiology Data:** Radiology Report, Radiology Image

### MDM (Assessment and Plan)

#### Problem List

**(1) Respiratory failure requiring intubation**

**Status:** Acute

**(2) Multiple vessel coronary artery disease**

**Status:** Chronic

**(3) Hypertension**

**Status:** Chronic

**Qualifiers:**

**Qualified Codes:** I10 - Essential (primary) hypertension

**(4) Diabetes**

**Status:** Chronic

**Qualifiers:**

**(5) Hyperlipidemia**

**Status:** Chronic

**Qualifiers:**

**Qualified Codes:** E78.5 - Hyperlipidemia, unspecified

#### Assessment/Plan

Upon my evaluation, this patient had a high probability of imminent or life-threatening deterioration due to status post CABG ×3, which required my direct attention, intervention, and personal management.

I have personally provided 30 minutes of critical care time exclusive of time spent on separately billable procedures. Time includes review of laboratory data, radiology results, discussion with consultants, and monitoring of potential decompensation. Interventions were performed as documented above.

#Respiratory failure requiring intubation

Dear Dr. Tebi ,

Thank you for your referral to my office. I had the pleasure of seeing your patient, Steevio Bardakjian, in my office today. My evaluation follows.

#### Reason For Visit

The patient is being seen for an initial cardiac evaluation. Reason for visit: Patient to be seen for abnormal stress test, hyperlipidemia, hypertension and Diabetes obesity.

#### History of Present Illness

Symptoms: Denied: claudication, dizziness, dyspnea, exertional dyspnea, edema, orthopnea, shortness of breath, syncope, palpitations and fall.

Patient is a 51 yo F w PMH sig for HTN, DM, hyperlipidemia, former smoking who presents for cardiac evaluation.

Patient was planned to undergo knee surgery, sounds like he has a torn meniscus in the right knee. Patient had a preop evaluation through Workmen's Comp. apparently, was found to have evidence of apical and distal inferior ischemia on stress.

ECG today exhibits sinus rhythm with some Q waves inferiorly, inferolateral T wave inversions.

Patient denies smoking alcohol or drug use. Family history negative for premature coronary artery disease.

Was taking metformin and losartan.

Labs drawn May 14, 2021. Cholesterol 208, HDL 49, triglycerides 119, LDL 138, CRP 8.4, sodium 133, potassium 4.6, BUN 25, creatinine 0.62, albumin 4.6, normal LFTs, hemoglobin A1c 10. TSH 4.8, hemoglobin 13.9, platelet count 258.

Spoke extensively with the patient, multiple cardiac risk factors who presents for cardiac evaluation. Patient denies chest pain, shortness of breath, lower extremity edema, orthopnea, PND, palpitations or syncope. Does have some venous stasis changes in the anterior shins bilaterally. However no significant edema noted.

Patient is a poorly controlled diabetic hemoglobin A1c 10, LDL elevated, history of smoking until his 30s, poor blood pressure control. As such at high risk for obstructive coronary disease, and Lexiscan suggest the same.

Plan will be for diagnostic cardiac catheterization and possible PCI. Mechanical atherectomy may be needed. Benefits, risks, alternatives discussed with the patient. Risks include but are not limited to bleeding required transfusion, infection, blood vessel damage requiring surgery, stroke, contrast induced renal failure, contrast induced allergic reaction, heart attack, emergent CABG and even death. Patient understands these risks and is willing to proceed.

Request two-dimensional echocardiogram. Start patient on low-dose aspirin 81 mg by mouth daily, start metoprolol tartrate 12.5 mg by mouth twice a day, increase atorvastatin 40 mg by mouth daily at bedtime. Continue diabetic control per endocrinology recommendation.

Echocardiogram shows normal left ventricular size, mild LVH, normal wall motion, EF 65%. No valvular issues.

Patient: Steevio Bardakjian  
 Encounter: 06/10/2021

EMRN: 1497060

Plan for cardiac cath. Spoke extensively regarding findings and possible therapies.

#### Current Meds

- Atorvastatin Calcium 40 MG Oral Tablet; TAKE 1 TABLET AT BEDTIME Requested for: 25May2021; Last Rx:25May2021 Ordered
- Lisinopril 10 MG Oral Tablet; TAKE 1 TABLET DAILY; Therapy: (Recorded:24May2021) to Recorded
- metFORMIN HCl - 1000 MG Oral Tablet; TAKE 1 TABLET BY MOUTH TWICE DAILY; Therapy: 20Apr2021 to Recorded
- Metoprolol Tartrate 25 MG Oral Tablet; TAKE 0.5 TABLET Twice daily Requested for: 25May2021; Last Rx:25May2021 Ordered
- Nitroglycerin 0.4 MG Sublingual Tablet Sublingual; DISSOLVE 1 TABLET UNDER THE TONGUE AS NEEDED FOR CHEST PAIN; Last Rx:25May2021 Ordered

#### Allergies

- No Known Drug Allergies

#### Active Problems

- Abnormal ECG (R94.31)
- Abnormal stress test (R94.39)
- Benign essential hypertension (I10)
- Diabetes mellitus (E11.0)
- Hyperlipidemia (E78.5)

BARDAKJIAN, STEEVIO

Doctor: Yasuda, Roderick K. M.D.

Admit: 06/29/21 M/51 05/23/1970 M247-1

**Discussion/Summary**

Patient is a 51 yo F w PMH sig for HTN, DM, hyperlipidemia, former smoking who presents for cardiac evaluation.

1. Abnormal stress test/abnormal ECG: Patient with multiple cardiac risk factors, Lexiscan suggested distal inferior, and apical ischemia, with intact left ventricular systolic function. Request two-dimensional echocardiogram to evaluate cardiac structure and function.

Initiate patient on low-dose aspirin, increase atorvastatin 40 mg by mouth daily at bedtime, start metoprolol 12.5 mg by mouth twice a day.

In addition will prescribe patient sublingual nitroglycerin to be used as needed for chest pressure, tightness, discomfort, or shortness of breath at rest. Should he have any other symptoms that are not resolved within 5-10 minutes of take a nitroglycerin he should present to the ER call 911.

Benefits, risks, alternatives to cardiac catheterization discussed with the patient. Patient has consented to cardiac catheterization, possible PCI, possible mechanical atherectomy or support device implantation. Plan will be right radial approach for diagnostic cardiac cath.

2. Hypertension: Continue on current dose of lisinopril, add metoprolol at current regimen.

3. Hyperlipidemia: Elevated LDL, increase atorvastatin to 40 Mill grams by mouth daily at bedtime.

4. Diabetes: Extremely poor control hemoglobin A1c at last check was 10, recommend close follow-up with endocrinology.

5. Preop cardiac evaluation: Given abnormal stress testing, patient may need revascularization dual antiplatelet therapy, unfortunately meniscus knee surgery will have to be on hold.

Patient: Steevio Bardakjian  
 Encounter: 06/10/2021

EMRN: 1497060

6. Former smoker: Counseled on importance of smoking abstinence. Patient states he last smoked in his mid 30s.

Return to clinic after procedure.

Thank you very much for allowing me to participate in the care of this patient. If you have any questions, please do not hesitate to contact me.

With best regards,

Jun 29, 2021 at 05:13

**Date of Consult:** Jun 29, 2021

**Consult Requested by**

Nastarn Hashemi, MD.

**Reason for Consultation**

Complicated type 2 diabetes mellitus.

**Chief Complaint**

Chest pain.

**History of Present Illness**

51-year-old male with multiple medical problems including obesity, complicated type 2 diabetes mellitus, hypertension, dyslipidemia, and chronic back pain admitted to the Henry Mayo Newhall Memorial Hospital Hospital because after found to have multiple vessel coronary artery disease. He underwent CABG x3 stents. Postop patient admitted to ICU for further evaluation and management. Patient currently on insulin drip. CXR: Mild congestive heart failure. Question trace bilateral pleural effusions.

Patient diagnoses with the type 2 diabetes mellitus in 2015 and the reports that managed based on metformin therapy, diet, and exercise.

Patient recent hemoglobin A1c 6.8%.

**Review of Systems**

**GENERAL:** Denies fever, chills, or weight loss. + Feeling weak.

**EYES:** Denies eye pain, discharge, or diplopia.

**ENT:** Denies headache, sore throat, difficulty swallowing, decreased hearing, or epistaxis.

**NECK:** Denies neck pain or stiffness.

**PULMONARY:** No shortness of breath, cough, sputum production, or hemoptysis.

**CARDIAC:** Denies chest pain, palpitations, orthopnea, or PND.

**GI:** No nausea, vomiting, diarrhea, constipation, or abdominal pain.

**GU:** Denies dysuria, frequency, urgency, hematuria, or nocturia.

**MUSCULOSKELETAL:** Denies arthralgias, myalgias, or focal swelling.

**NEURO:** Denies focal numbness, weakness, or confusion.

**SKIN:** Denies rash, irritation, itching, or erythema.

**ENDOCRINE:** No polydipsia, polyuria, polyphagia, heat or cold intolerance.

**PSYCHIATRIC:** Denies depression or anxiety.

**Medical History**

**Medical History**

**(1) Multiple vessel coronary artery disease**

**(2) Type 2 Diabetes mellitus**

### Medical Decision Making

#### **Assessment/Plan**

51 year old male with:

#### **# Complicated Type 2 Diabetes Mellitus.**

- D/c insulin drip at 23:00
- Insulin glargine **35 units** q.h.s.
- Insulin lispro sliding scale q.3 hr

#### **# Coronary artery disease.**

- Multiple vessel disease and status post CABG x3.
- Admitted to ICU for further evaluation and management.
- On beta blocker, aspirin, and statin.
- Per cardiology and pulmonology.

#### **# Hypertension.**

- Blood pressure fluctuates but controlled.
- Lisinopril 20 mg p.o. daily.
- Metoprolol 25 mg p.o. b.i.d.

#### **# Dyslipidemia.**

Henry Mayo Newhall Memorial Hospital

Dr. Yasuda

**Reason for Consultation**

CAD s/p CABG 6/29/21

**Chief Complaint**

CABG for ACS and severe multivessel CAD

**History of Present Illness**

51-year-old male with history of diabetes, hypertension and hyperlipidemia with recent ACS admitted for CABG status post 4V CABG 6/29/21. Postop patient extubated after few hours, currently on Levophed, normal renal function, normal sinus rhythm, tolerating diet.

**Review of Systems**

14 point ROS negative except HPI

**Medical History**

- (1) Acute low back pain
- (2) Diabetes
- (3) Hypertension
- (4) Hyperlipidemia
- (5) Multiple vessel coronary artery disease
- (6) Chronic back pain
- (7) Anxiety
- (8) History of back surgery
- (9) History of lateral meniscus repair of left knee

**Medical Decision Making**

**Assessment/Plan**

**ASSESSMENT:**

1. Severe multivessel CAD with recent ACS, now electively admitted for CABG. EF known to be intact.
2. s/p CABG on 6/29 by Dr. Yasuda (SVG to RPL, SVG to OM, radial to ramus (radial graft was proximally anastomosed to SVG to OM per surgical report as opposed to aorta), LIMA to LAD)
  - recovering well, extubated, on levophed gtt @ 1 (being titrated off), normal creatinine, normal sinus rhythm, post-op anemia requiring blood transfusion
3. Diabetes
4. Hypertension

—  
5. Hyperlipidemia

RECOMMENDATIONS:

1. Continue aspirin, atorvastatin.
2. Hold off on starting metoprolol, calcium channel blocker until BP stable for 24 hours after stopping levophed
3. Discontinue lisinopril as BP low. If BP allows, would rather consider adding low dose diltiazem for 6 months for improved radial artery graft patency rates. If stable BP off levophed, start on 7/1 with diltizem 30 mg q6h to make sure patient tolerating. If tolerating, can be switched to Diltiazem CD 120 mg nightly.
4. PRBC transfusion as needed to keep Hgb > 8
5. Replete K and Mg as needed

Thank you for the consult. will follow. Please call with Qs.

**History**

**Date of Consult:** Jun 29, 2021

**Consult Requested by**

Critical care

**Reason for Consultation**

Status post CABG x3

**Chief Complaint**

History of chest pain

**History of Present Illness**

51 years old male with history of multiple vessel coronary artery disease status post CABG x3 stents to the ICU for further monitoring on the ventilator.

CXR: Mild congestive heart failure.

Question trace bilateral pleural effusions.

Pulses are intact in all 4 extremities and warm

Good urine output

Chest tube output 170 cc and stopped

Hemoglobin 8.1, fibrinogen 246, platelets 55

Hemodynamics:

Mean arterial pressure 80 mmHg off vasopressors

Normal sinus rhythm 83

CVP 8 cm of water

PAD 14 mmHg

Cardiac index 1.9

SV02 67

SVR pending

Labs pending

**Medical History**

### Physical Exam

The patient remains critically sick intubated and on assisted ventilation. Follows commands on the ventilator, tolerating pressure support ventilation. Glasgow Coma Scale 10 T

HEENT/EYES is grossly unremarkable/ pupils appeared/ PERRLA equal and sclerae anicteric/ oropharynx clear/ good dentition/ no epistaxis

Neck without palpable masses or adenopathy no thyromegaly/ supple / negative carotid bruits

Chest fairly clear and symmetrical to auscultation/ no wheezing or rhonchi or rales/ negative dyspnea or tachypnea/ no ETT secretions / Chest tube output 170 cc/ Ventilator Mechanics stable

Heart regular rate and rhythm no murmurs or gallops/ No gallops/ no JVD/ intact femoral pulses/ intact pedal pulses/ no peripheral edema/ blood pressure stable/ no vasopressors

### **Medical Decision Making**

#### **Problems:**

**(1) Respiratory failure requiring intubation**

**Status:** Acute

**(2) Multiple vessel coronary artery disease**

**Status:** Chronic

**(3) Hypertension**

**Status:** Chronic

#### **Qualifiers:**

**Qualified Codes:** I10 - Essential (primary) hypertension

**(4) Diabetes**

**Status:** Chronic

#### **Qualifiers:**

**(5) Hyperlipidemia**

**Status:** Chronic

#### **Qualifiers:**

**Qualified Codes:** E78.5 - Hyperlipidemia, unspecified

### **Assessment/Plan**

Upon my evaluation, this patient had a high probability of imminent or life-threatening deterioration due to status post CABG ×3, which required my direct attention, intervention, and personal management.

I have personally provided 40 minutes of critical care time exclusive of time spent on separately billable procedures. Time includes review of laboratory data, radiology results, discussion with consultants, and monitoring of potential decompensation. Interventions were performed as documented above.

#Respiratory failure requiring intubation

Patient tolerated weaning trial, we'll proceed to extubate

Chest x-ray stable

Following commands

Chest auscultation clear with minimal secretions

#Multivessel coronary artery disease status post CABG ×3

Status post CABG

Afebrile

Hemodynamically stable

Chest tube output 170 cc and stopped

Laboratories pending: Carbon dioxide 22, glucose 193

#History of hypertension

**DICTATED BY:** Roderick K. Yasuda M.D.

**DATE OF SURGERY:**  
06/29/2021

**PREOPERATIVE DIAGNOSES:**

1. Coronary artery disease.
2. Acute coronary syndrome.
3. Left main coronary stenosis.

**POSTOPERATIVE DIAGNOSES:**

1. Coronary artery disease.
2. Acute coronary syndrome.
3. Left main coronary stenosis.

**OPERATIVE PROCEDURE:**

1. Coronary bypass grafting x4; left internal mammary to the left anterior descending, saphenous vein via the radial artery to the intermediate branch, saphenous vein from the aorta to the obtuse marginal, saphenous vein from the aorta to the left ventricular extension branch.
2. Endoscopic vein harvest, left thigh and left arm.
3. Epi-aortic Doppler scan.

Hammond, CRNFA

**ANESTHESIA:**

General endotracheal, Dr. Bingham.

**FINDINGS:**

Cardiopulmonary bypass time 125 minutes. Cross-clamp time 66 minutes. Low temperature 33.1 degrees centigrade. By epiaortic Doppler scanning, there was absence of plaque in the ascending aorta from the aortic valve to the transverse arch. By transesophageal echo monitoring, ventricular function was preserved before as well as after bypass grafting. No inotrope pacemaker or transfusion were required.

Graft flows: Left ventricular extension branch 7 cc/min, OM2 of 20 cc/min, radial 26 cc/min to the OM1, and LIMA 17 cc/min.

**NARRATIVE REPORT:**

The patient was brought to the operating room and placed on the operative table in supine position. After placement of radial arterial line, general endotracheal anesthesia, Swan-Ganz catheter, Foley catheter, the chest, abdomen, and legs were prepped and draped with ChloraPrep. The left radial artery was harvested endoscopically and found to be of satisfactory caliber and quality, approximating 2 mm in diameter. Left greater saphenous vein was harvested endoscopically and found to be of satisfactory caliber and quality. The chest was entered through a mediastinotomy incision. Left pleural space was widely opened. Left internal mammary artery was taken out with electrocautery and Hemoclips and infused with papaverine solution. This was a 2 mm vessel with very good antegrade flow characteristics. A self-retaining retractor was placed and the

pericardium was divided in the midline and tacked to the sternal edges. Epiaortic Doppler scanning was performed by flushing the pericardial cavity with saline and running the probe from the aortic valve to the transverse arch with findings as noted above. Double aortic pursestrings were placed. A single venous pursestring was placed. The patient was systemically heparinized and cannulated for cardiopulmonary bypass with a 21-French aortic and 29/37 triple-venous cannula. A vent cath was placed on the ascending aorta for infusion of cardioplegic solution. There was absence of aortic insufficiency by transesophageal echo monitoring. The patient was placed on cardiopulmonary bypass and cooled to a systemic temperature of 33.1 degrees centigrade. The ascending aorta was cross-clamped. Cold high-potassium sanguineous cardioplegic solution was infused through the aortic root. Satisfactory diastolic arrest was achieved. Topical ice was used to further cool the heart. A pericardial pad was placed in the pericardial wall to protect the left phrenic nerve. Cardioplegic solution was given every 15-20 minutes. The base heart was elevated. The distal right coronary artery appeared to be too calcified. The left ventricular extension branch appeared to be suitable for grafting. A large arteriotomy was made. This was diffusely atherosclerotic. A vein graft was anastomosed with continuous 6-0 Prolene suture. The apex of the heart was elevated to the right.

The 2nd obtuse marginal branch was identified. A longitudinal arteriotomy was made. This was a 1.5 mm vessel. A vein graft anastomosed with continuous 7-0 Prolene suture. Next, the intermediate branch was identified. A longitudinal arteriotomy was made. This was a 2 mm vessel and the radial artery was anastomosed with continuous 7-0 Prolene suture. Lastly, during

**Signed**

re-warming, the heart was placed on an iced laparotomy pad. The mid left anterior descending was exposed. A longitudinal arteriotomy was made. This is a 2 mm vessel and it chronically occluded at the apex, and this was left alone. The left internal mammary artery was anastomosed to the left anterior descending with continuous 7-0 Prolene suture.

Warm blood was administered. The heart fibrillated \_\_\_\_\_ with 10 watt seconds. The heart began to beat with transient ventricular pacing. The cross-clamp was removed. The proximal anastomoses were constructed in the following sequence. The lower most was to the OM2, the more superior was to the left ventricular extension branch. The radial artery was anastomosed to the head of the obtuse marginal vein graft with 6-0 Prolene suture. After resumption of ventilation and normothermia, the patient was then weaned from cardiopulmonary bypass without the use of inotrope, pacemaker, or transfusion. Heparin was reversed with protamine. Repair suture was required toward the apex of the radial arterial graft anastomosis. Chest tube placed substernally as well as into the left pleural space. Temporary right ventricular pacemaker wire was brought out into the left upper quadrant of the abdomen. Interrupted stainless steel cable was used to approximate the sternum. Suture of 0-Vicryl used to approximate the pectoralis major fascia, 4-0 Monocryl closed the skin. Leg incisions were closed with Vicryl, Monocryl suture, and skin dressing. Sponge and instrument counts correct.

SINGLE FRONTAL RADIOGRAPH OF THE CHEST

EXAMINATION DATE AND TIME: 6/29/2021 5:58 AM

COMPARISON: None

REASON FOR STUDY: preop; no other history given

TECHNIQUE: Single frontal radiograph of the chest is performed.

FINDINGS:

The lungs are clear.

The cardiac and mediastinal contours are unremarkable.

The soft tissue and osseous structures are normal for age.

IMPRESSION:

No active disease is seen in the chest.

Richard L. Goldman M.D./TR: Date:06/29/21 Time:0749

SINGLE FRONTAL RADIOGRAPH OF THE CHEST

EXAMINATION DATE AND TIME: 6/29/2021 1:16 PM

COMPARISON: 6/29/2021

REASON FOR STUDY: POST OP CABG

TECHNIQUE: Single frontal radiograph of the chest is performed.

FINDINGS:

Mild congestive heart failure has developed. A new chest tube is noted in the left pleural space. There is no evidence of pneumothorax. There is questionable trace pleural effusion bilaterally. The endotracheal tube terminates in satisfactory position above the carina. The nasogastric/orogastric tube terminates in satisfactory position below the diaphragm.

Sternal wires, mediastinal drains surgical clips and a new Swan-Ganz catheter identified. The Swan-Ganz catheter terminates in the proximal right pulmonary artery.

The soft tissue and osseous structures are normal for age.

IMPRESSION:

Mild congestive heart failure.

Question trace bilateral pleural effusions.

SINGLE FRONTAL RADIOGRAPH OF THE CHEST

EXAMINATION DATE AND TIME: 6/30/2021 7:56 AM

COMPARISON: 6/29/2021

REASON FOR STUDY: Dyspnea, status post cardiac bypass surgery

TECHNIQUE: Single frontal radiograph of the chest is performed.

FINDINGS:

The Swan-Ganz catheter has been removed. The nasogastric tube has also been removed. The left-sided chest tube remains in place. The heart remains mildly enlarged with evidence for cardiac bypass surgery. The pulmonary vascular pattern is not engorged. The stranding densities in the lung bases are improved. No new infiltrates are seen. There is no evidence for pneumothorax.

IMPRESSION:

IMPROVING BIBASILAR SUBSEGMENTAL ATELECTASIS.

Ted A. Hittle M.D./TR: Date:06/30/21 Time:0809

SINGLE FRONTAL RADIOGRAPH OF THE CHEST

EXAMINATION DATE AND TIME: 7/1/2021 8:37 AM

COMPARISON: 6/30/2021 chest x-ray

REASON FOR STUDY: dyspnea, chest tube

TECHNIQUE: Single frontal radiograph of the chest is performed.

FINDINGS:

Low volumes and bibasilar subsegmental atelectasis appear unchanged. The left chest tube is unchanged in position directed into the left apex. There is no left pneumothorax. A right internal jugular sheath is unchanged.

There is unchanged borderline cardiomegaly and sternal wires.

Sternal wires are redemonstrated.

IMPRESSION:

No change in low lung volumes and basilar subsegmental atelectasis.

Richard L. Goldman M.D./TR: Date:07/01/21 Time:0929

6/28/21 1225 13.2 1.0(a) 26(b)

NOTES: (a) INR Therapeutic Range for patients on oral anticoagulant: 2.0 - 3.0  
The International Normalized Ratio (INR) is vital when monitoring patients on oral anticoagulant therapy. The INR system has promoted international agreement on optimal therapeutic ranges for specific conditions as follows:  
Prophylaxis/treatment of Venous Thrombosis, Pulmonary Embolism: 2.0 - 3.0  
Prevention of Systemic Embolism from Arterial Fibrillation: 2.0 - 3.0  
Myocardial Infarction: 2.0 - 3.0

Test	Date	Time	Result	Reference	Units
SARS COV2	6/28/21	1225	(f)	(NOT DETECT)	

NOTES: (f) NOT DETECTED  
See also (g)  
(g) Results are for the detection of SARS-CoV-2 RNA. The SARS-CoV-2 RNA is generally detectable in nasopharyngeal swab specimens during the acute phase of infection.

Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Positive results are indicative of active infection with SARS-CoV-2; clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status. Positive results do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease.

A false negative result may occur if a specimen is improperly collected, transported, or handled. False negative results may also occur due to inadequate levels of virus present in the sample.

This assay is for use under the FDA Emergency Use Authorization (EUA) only.

**Discharge Summary**

Name: BARDAKJIAN,STEEVIO  
Date of Admission: 06/15/21  
Date of Discharge: 06/16/21

MR#: M000748903  
ACCT#: V00020475307  
ROOM#: TOWER3 T326-1

\*\*Signed\*\*

DICTATED BY: Lu L Wang M.D.

**Discharge Summary**

**Date/Time of Admission**

Jun 15, 2021 at 09:36

**Discharge Date:** Jun 16, 2021

**Admitting Diagnosis**

- (1) Multiple vessel coronary artery disease

**Discharge Diagnoses**

- (1) Multiple vessel coronary artery disease  
(2) Diabetes  
(3) Hypertension  
(4) Hyperlipidemia  
(5) Chronic back pain  
(6) Anxiety

**Recommended Follow up Plan**

Dr Das in 3-5 days  
plan for Bypass surgery as soon as possible

**Consultants**

Dr Das  
Dr Yasuda CT surgeon

**Hospital Course**

52-year-old male with history of diabetes hypertension hyperlipidemia, recent right meniscus injury presents for angiogram.

Patient was getting preop workup to be ready for meniscus surgery, he was found to have positive stress test, Dr. Das performed elective angiogram which found to have multivessel disease. (LMA 60%, LAD 80-100%, Circumflex artery 80%  
RCA 40% -- 80%. PDA disease.Ramus 70 % stenosis.)

patient is admitted for monitor and waiting for CT surgeon evaluation. he is monitored overnight on tele without acute events and asymptomatic.

Patient reports he feels well there is no chest pain or any other complaint. he is anxious because he is unexpected result for him and he feels stressed out for the coming bypass surgery. He told me he is normally very active.

patient is evaluated by CT surgeon Dr Yaduda initially had Bypass surgery planned on Friday 6/18, however patient is emotional and want to go home get financial paperwork done for his wife. extensive discussion with DR Das and myself. patient understands the risk but needs time to arrange family issue and mentally ready for bypass surgery. he has no cardiac symptoms. VS stable. he is on aspirin/lipitor/metorolol/isinopril medical management. Dr Das agrees discharge with close follow up in 3-5 days and arranged for cardiac bypass surgery in 1 week. we have explained given disease patient could be at unknown risk for angina, heart failure, stroke, MI and death. Patient should have low threshold for return to hospital if any symptoms. patient understands.

Patient:	Steevio Bardakjian 25467 Splendido Ct	EMRN:	1497060
		Age/DOB:	51/May 23, 1970
	Stevenson Ranch, CA 91381	Home:	(818) 406-2639
05/24/2021		Work:	(747) 210-4405

Dear Dr. Tebi ,

Thank you for your referral to my office. I had the pleasure of seeing your patient, Steevio Bardakjian, in my office today. My evaluation follows.

### **Reason For Visit**

The patient is being seen for an initial cardiac evaluation. Reason for visit: Patient to be seen for abnormal stress test, hyperlipidemia, hypertension and Diabetes obesity.

### **History of Present Illness**

Symptoms: Denied: claudication, dizziness, dyspnea, exertional dyspnea, edema, orthopnea, shortness of breath, syncope, palpitations and fall.

Patient is a 51 yo F w PMH sig for HTN, DM, hyperlipidemia, former smoking who presents for cardiac evaluation.

Patient was planned to undergo knee surgery, sounds like he has a torn meniscus in the right knee. Patient had a preop evaluation through Workmen's Comp. apparently, was found to have evidence of apical and distal inferior ischemia on stress.

ECG today exhibits sinus rhythm with some Q waves inferiorly, inferolateral T wave inversions.

Patient denies smoking alcohol or drug use. Family history negative for premature coronary artery disease.

Currently takes metformin and losartan.

Labs drawn May 14, 2021. Cholesterol 208, HDL 49, triglycerides 119, LDL 136. CRP 6.4, sodium 133, potassium 4.6, BUN 25, creatinine 0.82, albumin 4.6, normal LFTs, hemoglobin A1c 10. TSH 4.8, hemoglobin 13.9, platelet count 258.

Spoke extensively with the patient, multiple cardiac risk factors who presents for cardiac evaluation. Patient denies chest pain, shortness of breath, lower extremity edema, orthopnea, PND, palpitations or syncope. Does have some venous stasis changes in the anterior shins bilaterally. However no significant edema noted.

Patient is a poorly controlled diabetic hemoglobin A1c 10, LDL elevated history of smoking until has been 30s, poor blood pressure control. As such at high risk for obstructive coronary disease, and Lexiscan suggest the same.

Plan will be for diagnostic cardiac catheterization and possible PCI. Mechanical atherectomy may be needed. Benefits, risks, alternatives discussed with the patient. Risks include but are not limited to bleeding required transfusion, infection, blood vessel damage requiring surgery, stroke, contrast induced renal failure, contrast induced allergic reaction, heart attack, emergent CABG and even death. Patient understands these risks and is willing to proceed.

Request two-dimensional echocardiogram. Start patient on low-dose aspirin 81 mg by mouth daily, start metoprolol tartrate 12.5 mg by mouth twice a day, increase atorvastatin 40 mg by mouth daily at bedtime. Continue diabetic control per endocrinology recommendation.

Patient: Steevio Bardakjian  
Encounter: 05/24/2021

EMRN: 1497060

#### Current Meds

- Lisinopril 10 MG Oral Tablet; TAKE 1 TABLET DAILY;  
Therapy: (Recorded:24May2021) to Recorded
- metFORMIN HCl - 1000 MG Oral Tablet; TAKE 1 TABLET BY MOUTH TWICE DAILY;  
Therapy: 26Apr2021 to Recorded

#### Allergies

##### Medication

- No Known Drug Allergies

#### Social History

##### Problems

- Former smoker (Z87.891)

#### Family History

##### Father

- Denied: Family history of acute myocardial infarction

#### Review of Systems

All other systems reviewed and are negative. As noted in the HPI

**Cardiovascular ROS:** no chest pain or discomfort. **Constitutional:** denies feeling tired (fatigue). **Eyes:** no diplopia. **ENT/Mouth:** denies hearing loss. **Respiratory:** denies shortness of breath. **Gastrointestinal:** denies abdominal pain. **Genitourinary:** no hematuria. **Skin:** no rash. **Musculoskeletal:** no muscle aches. **Psychiatric:** denies anxiety. **Endocrine:** not intolerant to cold and not intolerant to heat. **Neurological:** denies fainting. **Hematologic/Lymphatic:** no tendency for prolonged bleeding. **Allergic/Immune:** no complaint of recent allergic reaction.

#### Vitals

##### Vital Signs

	Recorded: 24May2021 03:11PM
Height	5 ft 11 in
Weight	205 lb
BMI Calculated	28.59 kg/m <sup>2</sup>
BSA Calculated	2.13
Systolic	160
Diastolic	90
Heart Rate	108
O <sub>2</sub> Saturation	98
NQF0028 Tobacco Use	Tobacco User

#### Physical Exam

**Constitutional** General appearance: No acute distress, well appearing and well nourished.

**Eyes** Conjunctiva and lids: No erythema, swelling or discharge.

**Ears, Nose, Mouth, and Throat** Teeth, Gums and Palate: Normal good dentition.

**Neck** Jugular veins: Normal, non-distended.

Patient: Steevio Bardakjian  
Encounter: 05/24/2021

EMRN: 1497060

Pulmonary Auscultation of lungs: Clear to auscultation.  
**Cardiovascular**  
Auscultation of heart: Normal rate and rhythm, normal S1 and S2, no murmurs.  
Examination of extremities for edema and/or varicosities: Venous stasis changes.  
**Musculoskeletal** Gait and station: Normal.  
Skin Skin and subcutaneous tissue: Normal without rashes or lesions.  
**Neurologic** General neurologic and sensory: Grossly non-focal.  
**Motor**: Involuntary movements: Negative.  
**Psychiatric** Orientation to person, place and time: Normal. Mood and affect: Normal.

#### Results/Data

ECG performed on 5/24/21  
Rhythm and rate: sinus tachycardia P-waves: the P wave is normal. Q-waves are present in lead(s) II, III, AVF.  
The T waves are inverted. Visualized and interpreted by myself.  
Recent labs have been reviewed.

#### Procedure

A Echocardiogram was performed.

#### Assessment

##### Assessed

- Abnormal stress test (R94.39)
- Abnormal ECG (R94.31)
- Diabetes mellitus (E11.9)
- Benign essential hypertension (I10)
- Hyperlipidemia (E78.5)
- Former smoker (Z87.891)

#### Discussion/Summary

Patient is a 51 yo F w PMH sig for HTN, DM, hyperlipidemia, former smoking who presents for cardiac evaluation.

1. Abnormal stress test/abnormal ECG: Patient with multiple cardiac risk factors, Lexiscan suggested distal inferior, and apical ischemia, with intact left ventricular systolic function. Request two-dimensional echocardiogram to evaluate cardiac structure and function.

Initiate patient on low-dose aspirin, increase atorvastatin 40 mg by mouth daily at bedtime, start metoprolol 12.5 mg by mouth twice a day.

In addition will prescribe patient sublingual nitroglycerin to be used as needed for chest pressure, tightness, discomfort, or shortness of breath at rest. Should he have any other symptoms that are not resolved within 5-10 minutes of take a nitroglycerin he should present to the ER call 911.

Benefits, risks, alternatives to cardiac catheterization discussed with the patient. Patient has consented to cardiac catheterization, possible PCI, possible mechanical atherectomy or support device implantation.  
Plan will be right radial approach for diagnostic cardiac cath.

2. Hypertension: Continue on current dose of lisinopril, add metoprolol at current regimen.

3. Hyperlipidemia: Elevated LDL, increase atorvastatin to 40 Mill grams by mouth daily at bedtime.

4. Diabetes: Extremely poor control hemoglobin A1c at last check was 10, recommend close follow-up with endocrinology.

5. Preop cardiac evaluation: Given abnormal stress testing, patient may need revascularization dual antiplatelet

General instruction for Governmental Payers: All orders for Clinical laboratory tests must include a statement of the medical reason for those tests. The reason(s) listed below must be linked with the test(s) ordered by noting the number of the reason in the space next to the test ordered. If a specific test is not supported by documentation in the medical record or is clearly for screening purposes, the test must be designated as a "Screening Test" and must be accompanied by the signed ABN.

DIAGNOSIS-SYMPOMS and ICD-9 (CODES) 1. 2. 3.  
4. 5. 6. 7.

Screening Test: All tests ordered for the purpose of screening, including tests ordered as part of routine physical examinations, must be accompanied by an ABN completed by the ordering physician and signed by the patient. Laboratories may not bill the patient for the service unless the ABN has been completed and signed by the patient prior to the rendition of the service(s). ABN/MSP

**History**

**Admit Date/Time**

Jun 15, 2021 at 09:36

**Date/Time of Service**

DATE: 6/15/21 TIME: 11:05

**Primary Care Provider**

Dr Tebi

**Chief Complaint**

positive angiogram

**Admitting Diagnosis**

**(1) Multiple vessel coronary artery disease**

**History of Present Illness**

52-year-old male with history of diabetes hypertension hyperlipidemia, recent right meniscus injury presents for angiogram.

Patient was getting preop workup to be ready for meniscus surgery, he was found to have positive stress test, Dr. Das performed elective angiogram which found to have multivessel disease. (LMA 60%, LAD 80-100%, Circumflex artery 80% RCA 40% -- 80%. PDA disease. Ramus 70 % stenosis.)

patient is admitted for monitor and waiting for CT surgeon evaluation.

Patient currently reports he feels well there is no chest pain or any other complaint. he is anxious because he is unexpected result for him and he feels stressed out for the coming bypass surgery. He told me he is normally very active, he recently injured his right knee and he has pain after walk for 5 minutes. He also reports he has whitecoat related hypertension and hyperglycemia. Since his glucose and the blood pressure normally looks better at home compared to at doctor's office.

**Review of Systems**

Constitutional: Denies fever, chill or weight loss.

ENT: Denies hearing loss, nasal congestion or sore throat.

Eyes: Denies vision loss. Denies double vision.

CV: Denies palpitations. Denies chest pain.

Resp: Denies shortness of breath. Denies cough.

GI: Denies abdominal pain, nausea, vomiting, hematemesis, melena or hematochezia.

GU: Denies dysuria or urgency.

Msk: R knee and back pain

Skin: Denies new rash or itching.

Neuro: Denies headache, numbness, or tingling.

**DATE OF CONSULTATION:**  
06/15/2021

**REQUESTING PHYSICIAN:**  
Lu Wang, M.D., Sina Tebi, M.D., Jayanta Das, M.D.

**DIAGNOSIS:**  
Coronary artery disease, triple vessel.

**CLINICAL SUMMARY:**  
The patient is a 51-year-old diabetic gentleman, hypertension, hyperlipidemia, being evaluated for right knee surgery. A nuclear stress test was positive. He was sent for cardiac evaluation by Dr. Das and cardiac catheterization today. Normal left ventricular function. LAD has chronic total occlusion of the midportion. Left main ostial 60%, circumflex, 80%. RCA with multiple stenoses of 40%, 80%, and 60%. Carotid ultrasound: No significant stenosis. He has no known medical allergies. He denies history of TB, hepatitis, cancer, or stroke. Does not consume alcohol. He smoked from ages 21-39.

**FAMILY HISTORY:**  
Mother age 90, alive. Hypertension, diabetes. Father died at age 68. Bladder cancer.

**REVIEW OF SYSTEMS:**  
He admits to an intentional 20 pound weight loss over several months. Denies fever. He is COVID vaccinated. EYES: He wears glasses. RESPIRATORY: Denies shortness of breath, cough,

sputum production. CARDIAC: Denies heart murmur or arrhythmia. GI: Denies peptic ulcer disease, biliary tract disease, hematemesis. GU: Denies kidney stone, urinary tract infection, hematuria. MUSCULOSKELETAL: Low back right sciatica. He had L3-L5 discectomies in 2018, but still is symptomatic. NEUROLOGIC: Denies syncope, seizures, CVA. SKIN: Denies rash or boils. ENT: Denies epistaxis. GU: Denies kidney stone, urinary tract infection, or hematuria. GU/GI: Denies peptic ulcer disease, biliary tract disease, or hematemesis. CARDIAC: Denies heart murmur or arrhythmia.

**CURRENT MEDICATIONS:**

Lisinopril 20 mg per day, metoprolol 25 mg twice daily, Xanax, Percocet for pain, atorvastatin 40 mg per day, aspirin 81 mg per day, metformin 500 mg per day, over the counter supplement coenzyme Q10.

**PHYSICAL EXAMINATION:**

**VITAL SIGNS:** Height 5 feet 10 inches, weight 198 pounds. Blood pressure 144/85, pulse 94, respirations 14.

**HEENT:** Atraumatic, normocephalic. Nose, mouth, and throat clear. Excellent dentition.

**NECK:** Supple. No jugular venous distention. Good carotid pulsations.

**CARDIAC:** Regular rate and rhythm. No cyanosis, clubbing, or edema. Positive dorsalis pedis pulses.

**ABDOMEN:** Normal bowel sounds. Soft. No tenderness, mass, or guarding.

**MUSCULOSKELETAL:** Full range of motion of all 4 extremities.

**NEUROLOGIC:** Cranial nerves 2-12 intact. Motor, sensory, and cerebellar intact.

**IMPRESSION:**

1. Coronary artery disease, triple vessel, silent ischemic.
2. Diabetes.
3. Hypertension.
4. Hyperlipidemia.
5. History of smoking.
6. Positive family history for coronary disease.
7. Obesity.

**RECOMMENDATION:**

Myocardial revascularization with at least 1 arterial conduit. Potential need for blood transfusion was explained. The risks, benefits, and alternatives were explained. Complications include, but are not limited to, death, bleeding, infection, myocardial infarction, CVA or brain damage, and kidney failure requiring dialysis. All questions were answered for the patient and his wife and son. Currently the patient seems to be undecided and may elect to be discharged to consider his options.

6/15/21	1534	127					

NOTES: (c) Hemoglobin %A1c NGSP Reference Intervals:  
Non-Diabetic Range = <6.0  
Diabetic, Therapeutic Control = 6.5\*  
Action Suggested = >6.5

\*The guideline of <6.5 was established by the American College of Endocrinology and American Association of Clinical Endocrinologists. This guideline is stricter than the guideline of <7.0 established by the American Diabetes Association.

Any cause of shortened red cell survival (hemolytic anemia or other hemolytic diseases, pregnancy, recent significant blood loss) will reduce exposure of red cells to glucose with a consequent decrease in %A1c values. Caution should be used when interpreting the %A1c results from patient with chronic blood loss and consequent variable erythrocyte lifespan. Iron deficiency anemia can lead to an increased erythrocyte mass, thus altering the average age of erythrocytes.

(d) Cholesterol Interpretation:

Desirable <200 mg/dL  
Borderline-high 200-239 mg/dL  
High >=240 mg/dL

(e) Triglyceride Interpretation

Normal <150 mg/dL  
Borderline High Risk 150 - 199 mg/dL  
High Risk 200 - 499 mg/dL  
Very High Risk >=500 mg/dL

PROCEDURE: VS CAROTID/CEREBRAL

Interpretation Summary

Right minimal carotid atherosclerotic changes.  
 No significant obstructive lesions noted in the bilateral extracranial carotid system.  
 Antegrade flow noted in bilateral vertebral arteries.

## Cardiac Catheterization Report

Name: STEEVIO BARDAKJIAN  
MR#: M000748903 Admission #: V00020475307  
Date Of Birth: 05/23/1970 Age: 51 year(s)  
Height: 70.87 in. (180.0 cm) Weight: 205.03 lbs. (93.00 kg)  
BSA: 2.13 m<sup>2</sup> Gender: Male  
Study Date: 06/15/2021 Study Time:  
Case Start: 08:26 AM Case End: 08:49 AM Total Time: 23 min  
Diagnostic Cardiologist: JAYANTA DAS MD  
Circulator: DUSTIN DELAHUNTY, RN  
Scrub: Michell Burnett, RT  
Xray Technician: DONG HA RT  
Monitor: Colleen S James, RT  
Indication: Abnormal stress test, Diabetes, Hypertension

#### Clinical Data:

Hypertension: Yes  
 Dyslipidemia: Yes  
 Prior PCI: No  
 Prior CABG: No  
 Tobacco Use: Former  
 Diabetes: Yes

Currently on Dialysis: No  
CSHA (Canadian Study of Health and Aging) 3 - Managing Well  
Frailty Scale:

Procedures Performed  
LEFT HEART CATH COMPLETE  
Conclusions:

Diagnostic Conclusions  
Severe three vessel coronary artery disease and Moderately elevated left ventricular end diastolic pressure  
Follow-up Recommendations  
Aspirin every day , Statins daily, Plan medical management and risk factor reduction, Consult Cardiothoracic surgeon, Diabetic patient with multivessel CAD including ostial L main disease. Intact EF. Young age.  
Recommend CABG.

Diagnostic Findings:  
Coronary Angiography  
The coronary circulation is right dominant.

Left Main  
Left main artery: The segment is severely calcified. 60% ostial L Main stenosis. Dampening and ventricularization with engagement of catheter. . There is a 60 % stenosis. TIMI Flow 3.

Left Anterior Descending  
Left anterior descending artery: The segment is moderately calcified. 80% proximal calcified stenosis, 100% mid CTO. . There is a 100 % stenosis. TIMI Flow 3.  
Circumflex  
Circumflex artery: The segment is mildly calcified. Mid 80% stenosis prior to takeoff of mod OM1 and OM2. .

Printed on:

Procedure Location: CARDIAC CATHETERIZATION LAB  
Date Procedure Completed: 06/15/21 Order#: 0615-0001 Report#: 0615-0001

There is an 80 % stenosis. TIMI Flow 3.

### Right Coronary

Right coronary artery: Diffusely diseased vessel, mid 40% stenosis, 80% distal stenosis, 60% proximal R

PDA disease. There is an 80 % stenosis. TIMI Flow 3.

Ramus

Ramus intermedius: Hazy ostial disease, gives off large branch. . There is a 70 % stenosis. TIMI Flow 3.

## Left Heart Cath

LV to AO pullback was performed. The left ventricular end diastolic pressure was 30 mmHg.

## Valves

Aortic Valve: There is no aortic valve stenosis.

## Access

3:

The patient received a radial cocktail of verapamil, nitroglycerin and heparin intra-arterially. Right radial artery:

The puncture site was infiltrated with 10.0 ml of 1% Lidocaine. Vascular access was obtained using modified

seldinger technique and a 6 Fr Glidesheath Slender 10cm w/wire 0.021 was advanced into the vessel under aseptic condition and local anesthetic. The patient received a radial cocktail of verapamil, nitroglycerin and heparin intra-arterially.

### Coronary Angiography

#### **Left Coronary System:**

A 6-French JL4 catheter was positioned into the Vessel Ostia under fluoroscopic guidance.

## Contrast injections

were performed using hand injection. Angiograms were obtained in multiple views.

#### **Right Coronary System:**

A 6-French JR4 catheter was positioned into the Vessel Ostia under fluoroscopic guidance.

## Contrast

injections were performed using hand injection. Angiograms were obtained in multiple views.

### Contrast-M

Time	Contrast	Amount (ml)	Comment
8:52 AM	Visipaque	90	

### Complications

Time	Complication	Comment
8:50 AM	No complications	

Patient Name: BARDAKJIAN, STEEVIO

Study Date: 6/15/2021

MRN: M000748903

Admission ID: V00020475307

## Radiology Summary

Total Runs	
Total Cine Frames	

Identification (ID)	Cine	Archive	CD

Fluoro Time (minutes)	Diagnostic	Interventional	Total
	5.7		5.7

Dose Area Product (cGy cm <sup>2</sup> )	Exam Record DAP	Exam Fluoro DAP	Exam Total DAP
		5877.0	5877.0

## Allergies

Allergies:	NKDA
Latex Allergy Risk: Have you ever had any reaction after handling rubber products?	No
Latex Allergy Risk: Are you allergic to bananas, avocados, kiwi or chestnuts?	No
Latex Allergy Risk procedures innitiated?	No

## Pain/Mallampati Score

### Pre Procedure Pulses

RPT:	2+
LPT:	2+
RDP:	2+
LDP:	2+
Allen's Test (Right):	Positive flow returns in <15 secs

### Post Procedure Pulses

### Pre Procedure Labs

### Iodinated Contrast Media Administration

Is Patient Pregnant	No
Has Patient Had IV Contrast Previously	Yes
If Yes, were there any problems?	No
Iodine Allergy	No
Shellfish Allergy	No
Renal/Kidney Failure	No
Diabetes	Yes
Using Glucophage/Metformin	Yes
Date of Last Dose	6/12/2021

Patient Name: BARDAKJIAN, STEEVIO

Study Date: 6/15/2021

MRN: M000748903

Admission ID: V00020475307

#### IV Information

IV Site #1 Hep Lock to:	Internal Jugular
IV Gauge:	18

#### Outpatient Admission Form

DATE	6/15/2021
TIME	7:15:03 AM
Reason for admission per patient:	abnormal stress test
How Admitted:	Ambulatory
Preferred Language	English
Emergency contact/ Responsible adult to take patient home:	Princess Robles (partner)
Telephone Number:	661-607-3638
Primary Physician	Facey
Current Diet:	Regular
Last food/fluid intake:	6/14/21 at 2100
If diabetic, last blood sugar:	159
Sensory Aids:	Glasses

#### Outpatient Admission Form 2

Source of Information:	Patient
Medical:	Diabetes
Medical:	Hypertension
Surgeries:	Spinal Surgeries
Previous self/family reaction to anesthesia:	No
Dialysis:	No
Wt:	205 lbs
Ht:	5'11
Recent illness or exposure to communicable disease:	no
Alcohol Consumption:	No
Recreational Drug Use:	No
Smoker	Ex-smoker
Temperature in Fahrenheit:	98.0
History of clotting disorders:	No

#### Outpatient Admission Form 3

CARDIOVASCULAR:	WNL: Regular heart rate, capillary refill <3 sec
MUSCULOSKELETAL:	WNL: Age appropriate, Independent, steady gait, active ROM
RESPIRATORY:	WNL: Respirations even and unlabored, breath sounds clear
NEUROLOGICAL:	WNL: Age appropriate, alert and oriented, speech clear
INTEGUMENTARY:	WNL: Skin warm and dry, intact, normal turgor
GI/GU:	WNL: Abdomen soft and non-tender, bladder soft, voids

Patient Name: BARDAKJIAN, STEEVIO

Study Date: 6/15/2021

MRN: M000748903

Admission ID: V00020475307

	without difficulty
PSYCHOSOCIAL:	WNL: Age appropriate, cooperative, effective coping mechanism
Evidence/Verbalization of abuse/neglect:	NO
Swallowing Difficulty:	No

#### Outpatient Admission Form 4

Pain level (0-10)	4
Location:	lower back and right knee pain
Describe:	chronic ache
Patient will be free from injury MET:	YES
Patient will be free from discomfort MET:	YES
Barriers to learning:	None identified
Instructions given and able to verbalize understanding of:	Safety
Instructions given and able to verbalize understanding of:	Procedure
Instructions given and able to verbalize understanding of:	Equipment
Instructions given and able to verbalize understanding of:	Pain management
Instructions given and able to verbalize understanding of:	Oriented to surroundings
Instructions given and able to verbalize understanding of:	Post procedure teaching
Instructions given and able to verbalize understanding of:	Confidentiality/ Privacy Info given
Patient and/or family verbalizes adequate knowledge of skills/denies need for further information:	YES
Able to perform prescribed procedures:	YES
Patient and/or family displays effective communication of physical, emotional, and spiritual needs:	YES
Able to verbalize fears and concerns, age appropriate:	YES
Date:	6/15/2021
Initials:	KIC
Name:	Kimberly Clark
Title:	RN

NOTES: (a) INR Therapeutic Range for patients on oral anticoagulant: 2.0 - 3.0  
The International Normalized Ratio (INR) is vital when monitoring patients on oral anticoagulant therapy. The INR system has promoted international agreement on optimal therapeutic ranges for specific conditions as follows:  
Prophylaxis/treatment of Venous Thrombosis, Pulmonary Embolism: 2.0 - 3.0  
Prevention of Systemic Embolism from Arterial Fibrillation: 2.0 - 3.0  
Myocardial Infarction: 2.0 - 3.0  
Mechanical Prosthetic Heart Valves: 2.5 - 3.5  
Recurrent Systemic Embolism: 2.5 - 3.5  
(b) PTT Therapeutic Range for patients on Heparin Therapy: 66 - 96 seconds

Test	Date	Time	Result	Reference	Units
SARS-CoV2	6/11/21	1130	(e)	(NOT DETECT)	
NOTES: (e) NOT DETECTED See also (f) (f) Results are for the detection of SARS-CoV-2 RNA. The SARS-CoV-2 RNA is generally detectable in nasopharyngeal swab specimens during the acute phase of infection.  Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.  Positive results are indicative of active infection with SARS-CoV-2; clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status. Positive results do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease.  A false negative result may occur if a specimen is improperly collected, transported, or handled. False negative results may also occur due to inadequate levels of virus present in the sample.					
This assay is for use under the FDA Emergency Use Authorization (EUA) only.

NOTES: (a) INR Therapeutic Range for patients on oral anticoagulant: 2.0 - 3.0  
The International Normalized Ratio (INR) is vital when monitoring patients on oral anticoagulant therapy. The INR system has promoted international agreement on optimal therapeutic ranges for specific conditions as follows:  
Prophylaxis/treatment of Venous Thrombosis, Pulmonary Embolism: 2.0 - 3.0  
Prevention of Systemic Embolism from Arterial Fibrillation: 2.0 - 3.0  
Myocardial Infarction: 2.0 - 3.0

MR LUMBAR SPINE WITHOUT CONTRAST

EXAMINATION DATE AND TIME: 7/10/2018 3:30 PM

COMPARISON: MR lumbar spine dated 1/21/2014

REASON FOR STUDY: low back pain, numbness, weakness R side

PROTOCOL: Using a 3.0 tesla Siemens MRI system, coronal and axial T1, axial T2, sagittal T1, sagittal T2 and STIR sagittal scans were performed. A myelogram effect coronal turbo spin echo image was also done. There is some motion artifact which degrades images somewhat.

FINDINGS:

T12-L1: There is a congenitally small central spinal canal. There is no central spinal stenosis, disc extrusion or change from previously.

L1-L2: There is a congenitally small central spinal canal. There is no central spinal stenosis, disc extrusion or change from previously.

L2-L3: There is a congenitally small central spinal canal. There is unchanged mild central spinal stenosis secondary to disc bulging.

L3-L4: There is an unchanged congenitally small central spinal canal. There is a 3 mm bilateral disc bulge that flattens the ventral thecal sac and causes unchanged moderate central spinal stenosis. There is mild bilateral and recess and inferior foraminal narrowing.

MR #: M000748903	
Age: 48	Sex: M
DOB: 05/23/1970	Room#: ED
Procedure Location: MRI	
Date Procedure Ordered: 07/10/18	Order#: 0710-0020 Report#: 0710-0258

L4-L5: There is a congenitally small central spinal canal and a minimally larger bilateral 5 mm disc bulge that results in moderately severe central spinal stenosis. The thecal sac measures 7 mm in AP diameter. There is bilateral lateral recess and inferior foraminal narrowing from the disc bulging, facet and ligamentum flavum hypertrophy.

L5-S1: There is no central spinal stenosis, disc extrusion or change. There is unchanged mild facet hypertrophy.

The conus medullaris ends at T12-L1. The vertebral body bone marrow signal, height and alignment are normal.

**IMPRESSION:**

There is been slight progression at L4-5 which now includes a 5 mm disc bulge resulting in moderately severe central spinal stenosis.

There is a congenitally small central spinal canal that results in unchanged moderate L3-L4 central spinal stenosis.

DICTATED BY: Robert J Casey M.D.

**History of Present Illness**

**Time Seen by MD:** 11:37

**Chief Complaint:** Back Injury

**Stated Complaint:** BACK INJURY

**History of Present Illness:**

This is a 48-year-old male with right lower back pain radiating down the right leg with numbness and weakness.

The patient states the pain began on July 3 after bending over to pick something up at work at which time he felt a pinching and popping sensation in his low back with persistent right lower lumbar pain since that radiates down the back of his leg to the right ankle.

The patient reports that the pain has been persistent without any improvement and is not adequately controlled with Norco that was prescribed in the emergency department a few days ago, July 8. The patient was evaluated by a physician today and referred to the emergency room for MRI of the lumbar spine.

The patient feels a sense of numbness in the right lower extremity distal to the knee.

He has not noticed any weakness.

No problems with bowel or bladder control.

No abdominal pain, nausea, or vomiting .

No fevers or chills.

No dysuria or hematuria.

No history of recent trauma. No anticoagulant medication use. No known history of malignancy. No IV drug use.

No other complaints at this time.

The patient works at Olive View Medical Center.

**Review of Systems**

**Review of Systems**

Review of systems is as listed in the history of present illness. All other categories were reviewed and are negative.

---

HEART: Regular rate and rhythm, no murmurs, clicks, rubs or gallops.

ABDOMEN: Soft, non-tender, non-distended. No rebound or guarding.

BACK: There is right lower lumbar paraspinal tenderness to palpation. No midline tenderness of the cervical, thoracic or lumbar spine.

EXTREMITIES: There is no peripheral cyanosis or edema. No focal swelling or erythema.

NEURO: Alert and oriented. The patient moves all extremities well. Walking with a cane. The patient can feel light touch throughout the right lower extremity but there is decreased sensation to light touch distal to the right knee as compared to the left lower extremity. From the knee and proximal to this there is normal sensation to light touch bilaterally. There is decreased strength in the toes of the right foot as compared to the left. The patient is however able to flex and extend in the toes and all other major distributions of the right lower extremity.

PSYCHIATRIC: Normal affect.

EXAMINATION DATE AND TIME: 7/10/2018 3:30 PM

COMPARISON: MR lumbar spine dated 1/21/2014

REASON FOR STUDY: low back pain, numbness, weakness R side

PROTOCOL: Using a 3.0 tesla Siemens MRI system, coronal and axial T1, axial T2, sagittal T1, sagittal T2 and STIR sagittal scans were performed. A myelogram effect coronal turbo spin echo image was also done. There is some motion artifact which degrades images somewhat.

FINDINGS:

T12-L1: There is a congenitally small central spinal canal. There is no central spinal stenosis, disc extrusion or change from previously.

L1-L2: There is a congenitally small central spinal canal. There is no central spinal stenosis, disc extrusion or change from previously.

L2-L3: There is a congenitally small central spinal canal. There is unchanged mild central spinal stenosis secondary to disc bulging.

L3-L4: There is an unchanged congenitally small central spinal canal. There is a 3 mm bilateral disc bulge that flattens the ventral thecal sac and causes unchanged moderate central spinal stenosis. There is mild bilateral and recess and inferior foraminal narrowing.

L4-L5: There is a congenitally small central spinal canal and a minimally larger bilateral 5 mm disc bulge that results in moderately severe central spinal stenosis. The thecal sac measures 7 mm in AP diameter. There is bilateral lateral recess and inferior foraminal narrowing from the disc bulging, facet and ligamentum flavum hypertrophy.

L5-S1: There is no central spinal stenosis, disc extrusion or change. There is unchanged mild facet hypertrophy.

The conus medullaris ends at T12-L1. The vertebral body bone marrow signal, height and alignment are normal.

IMPRESSION:

There is been slight progression at L4-5 which now includes a 5 mm disc bulge resulting in moderately severe central spinal stenosis.

---

There is a congenitally small central spinal canal that results in unchanged moderate L3-L4 central spinal stenosis.

**Hospital Course**

Upon arrival to the Emergency Department, the patient was placed into a treatment area and was evaluated by myself. To facilitate the diagnostic process, the ancillary data listed above was ordered and reviewed.

**Medical Decision Making**

**Medical Decision Making**

The patient present with low back pain as described with decreased sensation to light touch in the right lower extremity distally.

The patient had been referred to the emergency room for MRI of the lumbar spine which I felt was appropriate. I called and discussed this with the radiologist to agreed to proceed with this study.

The patient was given intravenous morphine with improvement of his pain.

I am not clinically suspicious for non-spinal related causes of back pain such as aortic aneurysm or dissection.

MRI results were as described above.

I discussed the case with Dr. Mark Liker, who was on-call for neurosurgery. We discussed the clinical presentation and MRI findings and agreed upon discharge with a Medrol Dosepak. He kindly will follow-up with the patient. The patient was also given referrals to pain management specialist for consideration of epidural treatment.

Again the patient feels much better at this time and wants to go home.

At this point I believe the patient is stable for discharge with close outpatient followup.

We discussed return precautions. It was advised that the patient return immediately for any worsening condition. Close outpatient followup was advised.

The patient was noted to have markedly elevated blood sugar. He does not have any symptoms related to this. There is no evidence of diabetic ketoacidosis based on clinical assessment. Bicarbonate level was normal.

The patient has agreed to closely monitor his blood sugar and take his medication for diabetes as directed and return to the emergency room if it remains elevated.

**Disposition**

**Impression:**

**Primary Impression:**

Acute low back pain

**Qualified Codes:** M54.41 - Lumbago with sciatica, right side

**Condition:** Good

**Disposition (Non Admission):** HOME/SELF CARE (01)

**Patient Instructions:** ED Back Pain (Acute or Chronic)

**Referrals:**

Facey Medical (PCP)

Grewal, Narinder S. M.D.

Kumar, Devinder S. M.D.

Liker, Mark A. M.D.

**Additional Instructions:**

\*\*\* Return IMMEDIATELY if getting worse or for anything else of concern; especially numbness, weakness, increased pain, problems with control of your bowels or bladder, or anything else of concern.

\*\*\* See your primary care doctor for recheck in the next 1-2 days.

\*\*\* Please take naproxen or ibuprofen as needed, no more than directed on the container

\*\*\* Take Percocet as needed for pain that is not controlled by ibuprofen, no more than directed, do not drive when taking or take with Tylenol (acetaminophen), Norco, or any acetaminophen-containing products.

\*\*\*Please also follow-up with Dr. Liker of neurosurgery in the next week and with a pain management specialist (contact information is attached)

As a result of your evaluation today, it is felt that you can be discharged home with close outpatient follow-up. Of course, we cannot predict the future and should your condition worsen in any way or should you feel the need to be reevaluated, please return to emergency department immediately to be rechecked. We are open 24 hours a day, 7 days a week and are always staffed with a physician who will be available to see you.

Please follow up closely with a doctor as we discussed. If you do not have a primary physician at this time, you may call our physician referral hotline at (661) 253-8888 for assistance. You may also follow-up at the Valencia Clinic (call 661-673-8800; located on Soledad Canyon Road) or at Olive View Medical Center in Sylmar (14445 Olive View Drive, Sylmar, CA) or return here.

Thank you for choosing Henry Mayo Newhall Memorial Hospital for your emergent care needs. We understand that you have a choice of where to receive care, and we hope that we have met your expectations today.

**History of Present Illness**

**Time Seen by MD:** 11:24

**Chief Complaint:** Back Injury

**Stated Complaint:** R LEG PAIN

**Information Source:** Patient

**History of Present Illness:**

This is a 48-year-old male with a history of metformin controlled diabetes who is brought to the emergency department by private automobile. The patient arrives stating that there has been low back pain which is described as 10 out of 10, sharp/stabbing/shooting, and constant but waxing and waning for the past 4 days. The patient states that he was at work when he bent over to pick something up and felt a "pinched/pop" and started having severe pain to the right lower lumbar region. The pain seems to be localized in the right lower lumbar region and with radiation to the right posterior ankle. The pain seems to be worse with range of motion and movement. The patient denies any recent trauma. The patient denies any new bowel or bladder dysfunction, history of IV drug abuse, history of HIV, history of cancer, and any saddle anesthesia. The patient denies any fevers. He notes that he has to walk with a cane because of the significant amount of pain. He is been using his wife's Vicodin from an old surgery and ibuprofen but comes in for continued pain.

Patient also denies any focal weakness, severe/new paresthesias, syncope, and abdominal pain

To my knowledge, this patient has no history of the following abdominal aortic aneurysm risk factors: Prior abdominal aortic aneurysm, first order relatives with a history of AAA, connective tissue disease, or Marfan's Syndrome.

**Review of Systems**

**Review of Systems**

**GENERAL:** The patient denies any fevers or weight loss.

**EYE:** The patient denies any eye pain or discharge.

**ENT:** The patient denies any headache, sore throat, or difficulty swallowing.

**NECK:** The patient denies any neck pain or neck stiffness.

**PULMONARY:** The patient denies any shortness of breath, DOE, or cough.

**CARDIAC:** The patient denies any chest pain, palpitations, orthopnea, or PND.

**GI:** The patient denies any diarrhea or abdominal pain.

**GU:** The patient denies any dysuria, frequency, urgency or hematuria.

**MUSCULOSKELETAL:** The patient denies any arthralgias, myalgias or focal swelling.

**NEURO:** See history of present illness.

---

HEENT: Pupils equal round and reactive to light. EOMI. There is no scleral icterus.

ABDOMEN: The patient's abdomen is soft, nondistended and nontender without palpable/pulsatile mass

Cardiovascular: 2+ distal pulses x4, non-tachycardic

EXTREMITIES: There is no peripheral cyanosis or edema. No focal swelling or erythema.

NEURO: There is 5 out of 5 strength to bilateral hip flexors/extensors, knee flexors/extensors, foot flexors/extensors, EHL. Sensation is intact to light touch throughout bilateral lower extremities. Patellar and Achilles deep tendon reflexes are 2+ and symmetric. Face is symmetric. Alert and oriented.

BACK: No midline tenderness to the cervical, thoracic, or lumbosacral area

SKIN: There is no apparent rash or petechiae.

HEME/LYMPHATIC: There is no evidence of excessive bruising or lymphedema.

PSYCHIATRIC: The patient does not appear to be anxious or depressed.

**Hospital Course**

**Hospital Course**

Upon arrival to the Emergency Department, the patient was placed into a treatment area and was evaluated by myself. To facilitate the diagnostic process, the ancillary data listed above was ordered and reviewed.

**Procedures**

**Procedures**

This patient required extended observation in the emergency department. An order was thusly made for observational care. The patient was observed in this emergency department for over 3 hours. Multiple evaluations were made over the course of this time period. Time was used as a tool to determine eventual disposition of this patient. It should be noted that the patient's family history in this case is noncontributory.

**Medical Decision Making**

**Medical Decision Making**

This is a 48-year-old male presents for above back pain symptoms. They are afebrile, hemodynamically stable, and completely neurologically intact. There are no risk factors or red flags in patient's presentation, history or exam that indicate emergent pathology such as acute fracture, epidural abscess, discitis, cauda equina syndrome, meningitis or encephalitis.

Henry Mayo Newhall Memorial Hospital  
23845 McBean Parkway  
Valencia, California 91355

ED Physician Documentation

Name: BARDAKJIAN, STEEVIO  
MR#: M000748903  
ACCT#: V00017267108

\*\*Signed\*\*

---

However, patient was in significant pain and therefore was given IV hydromorphone, ketorolac, dexamethasone, and oral Flexeril for symptoms. He is placed in observational status upon arrival for repeat neurologic evaluations, pain control, and symptom assessment.

The patient had to have an additional IV dose of Dilaudid during his stay, however he remained neurologically intact. However, given the severity of his symptoms, I called the Facey hospitalist, Dr. Bhasin, who kindly agreed to arrange for expedited outpatient MRI.

I am aware that there are multiple causes of back pain in a patient such as this. Possible causes include but are not limited to lumbar strain, disc disease, degenerative arthritic conditions, radiculopathic conditions, cauda equina syndrome, epidural abscess, epidural hematoma, transverse myelitis, meningitis, fracture, ligamentous instability, peripheral neuropathies, spinal cord tumor, arteriovenous malformations, rheumatological disorders, metastatic disease, secondary tuberculosis and other infectious and noninfectious etiologies.

Again, however, given current that I have low suspicion for emergent pathology. As such, patient will be discharged with symptomatic control. Strict return precautions and follow-up instructions were discussed in detail with the patient. They understood and agreed with plan of care.

**Disposition**

**Impression:**

**Primary Impression:**

Acute lumbar radiculopathy

**Condition:** Fair

**Disposition (Non Admission):** HOME/SELF CARE (01)

**Patient Instructions:** ED Back Pain (Acute or Chronic), ED Sciatica

**Referrals:**

Facey Medical (PCP)

**Additional Instructions:**

A request for an MRI has been made on your behalf. You should receive a call in the next 24-48 hours regarding the appointment. Please contact the Facey office if you do not receive a phone call.

Return immediately for any new and severe, worsening, or concerning symptoms as we discussed.

Do not take naproxen and ibuprofen on the same day as they are similar medications.

First and foremost, we want to thank you for choosing Henry Mayo Newhall Memorial Hospital for your emergent care needs. We understand that you have a choice of where to receive care, and we hope that we have met your expectations today.

As a result of your evaluation today, it is felt that you can be discharged home with close outpatient follow-up. Of course, we cannot predict the future and should your condition worsen in any way or should you feel the need to be reevaluated, please return to emergency department immediately to be rechecked. We are open 24 hours a day, 7 days a week and are always staffed with a physician who will be available to see you.

We recommend that you be seen by your primary care physician within the next 24-48 hours to be reevaluated. If you do not have a primary physician at this time, you may call our physician referral hotline at (661) 253-8888 for assistance. In the event that you still have no access to a physician, you may follow-up at Olive View Medical Center in Sylmar.
